## Any way to put text beside a picture?

Whenever i put a picture in my html, i can't put any text beside it. Once i put the picture in i can't put text to the left or right of it for some reason. The only aligns that i know are left right and center is there anyway to make it align right-top?

Example

Text can go here

Picture

Picture here-----how do i get text here?

Picture

Text can go here

In order write text under the image you could use a **line break** such as `<br>` or `(`, whichever you prefer )after the image code.

in order to have text on the left or right of the image you can style your img as `style="float:left";` or `style="float:right";`

If the text is too close to the image you can play with `padding: 10px;` or less.
